Response to Arguments

Applicant's arguments filed 15 September 2006 have been fully considered but they are not persuasive or are drawn to claim amendments that are not entered. The arguments appear to be on the following grounds:

- a) Crump, Tan, and Anderson do not teach the compressing or expanding of a deformable thermal insulator based on the movements of a dispensing head in a second direction orthogonal to the first direction.
- b) Furthermore, the Crump patent does not disclose, teach, or suggest maintaining physical and thermal separation between the heated build chamber and a gantry that controls motion of the dispensing head with the deformable thermal insulators.

These arguments are not persuasive or are not considered for the following reasons:

- a) These remarks are directed at claim amendments that are not being entered.
- b) Tan was relied upon for teaching of the thermal separation (Final Rejection mailed 15 June 2006, page 3, lines 3-7), and the Examiner maintains that the motivation for the combination is valid, namely that Tan's apparatus (1) prevents the movement of materials, (2) Tan suggests the enclosure for a coating method, and (3) one of ordinary skill would have recognized the enclosure could help maintain the temperature of the controlled environment of Crump.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew J. Daniels whose telephone number is (571) 272-2450. The examiner can normally be reached on Monday - Friday, 8:00 am - 4:30 pm.

Art Unit: 1732
